Art Unit:

Claims 1-34 are presented for examination.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-34 are rejected under 35 U.S.C. 103 as being unpatentable over Dong et al. And Patrick et al..

Dong et al. Teach the use of a drug, progesterone in an extended delivery system of multi layers for hormones replacement therapy. See the entire document. Patrick teaches the use of the claimed compound, methylphenidate in an extended release form. See the entire document.

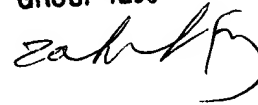

One skilled in the would have been motivated to employ the teaching of the above references, since they in combination relate to the use of a multi layer drug delivery system as old and also to the use of the claimed compounds in a sustained release formulation. The above references in combination make clear that a multi layer drug delivery system is old and well known. To substitute the claimed compounds for the compounds in Dong et al. in a multi-layer composition is within the skill of the artisan in the absence of evidence to the contrary. There is no evidence of record to demonstrate the advantages of claimed specific type of the distribution of the active ingredients or the specific distribution of polymers or secondary components.

Applicant has presented no evidence to establish the unexpected or unobvious nature of the claimed invention, and as such, claims 1-34 are properly rejected under 35 U.S.C. 103.
